

Proposed Meeting Story Map for Kara's Meeting - Voice Transcriber

Kara goes to the conference room, coffee in hand, 5 minutes early to prepare her thoughts for the bi-monthly status meeting. She's feeling happy and productive.

At 9:05 everyone is there, except John. Kara gets annoyed and starts the meeting. He can read the transcription later.

Kara explains to her team that they're using the Amazon Echo and Alexa Transcriber Skill to record the meeting. "Speak clearly and let's stay on topic."

Everyone introduces themselves to Alexa to start the transcript and voice recognition.

Everyone stays on topic. As they speak, Kara can see the transcript on her iPad showing who says what. This makes her very happy. She can focus on meeting, instead of taking notes.

The meeting ends at 9:25. That's 5 minutes early. Everyone was clear and concise. Kara is pleased with her team's progress and productivity.

Back in her office, Kara already received the full transcript in her email. She quickly copies the important points and ToDos. This will make the update to her boss easier.

John barges in. "OH! What I miss?" Kara replies smugly. "Just read the transcript." Kara hates repeating herself. She's happy she doesn't need to now. John can read the summary on his own time.

Proposed Story Map

Kara is a 30-year-old middle manager at a digital agency.

She has bi-monthly status meetings with her team. She use the Amazon Echo and Meeting Transcriber Alexa Skill to record them.

This converts voice to text, then emails everyone a transcript.

Now her meeting are a bit shorter. Everyone speaks clearly and concisely.

Meetings get off topic less, but she's worried her employees are too polite and agreeable, since the meeting is recorded word-for-word.

The summary emails are helpful to remind everyone of key points and ToDos. Kara even copies the key points for the update to her boss.
